Presentation type : Reading only
Title : Sneakers Certifié
Author : Luigi Gandemer
Institutions : ADRAR Formation

Abstract body :

Today I am presenting a web application which is a blog for sneakers enthusiasts, such as people who collect rare or basic sneakers.

Many sneaker blogs exist in this day and age but our blog's interface is simpler and easier to use, we don't run adds and our content is very spacious and readable.

Thanks to this application, people will be able to keep up with the brand new and collectible sneakers that are released by brands like Nike, Adidas and others. This web app makes it easier to view content related to the sneakers, such as the colorway, the date of release and additionnal information regarding the sneakers.

This wen app is targeting young and old people who are either passionned about sneakers or even the normal people who just want to know a bit more about what they might have on their feet.

This application will include a publishing system for the administrator to manage, he will be able to publish and display articles on sneakers with an image and two paragraphs. The administrator will also be able to modify and delete his articles. This app will be equipped with an administration system to delete any malicious or harmfull users. It will also include a sign up and sign in system, the users id, email adress, password, role, city and zipcode will be stored in our database.

For now this app is only available in France and in French but in the future I would like to add every French-speaking country and also add the English language to be able to also add every English-speaking country to develop the community on this web app.
